

EVEREST SYSTEMS

IMPROVE on the ORIGINAL

Roofing
Systems

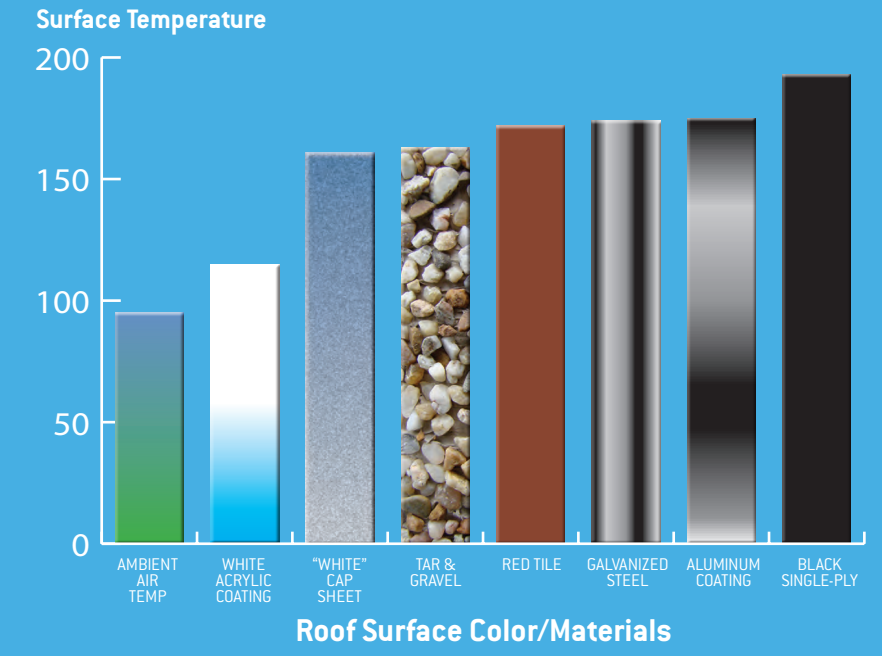

An Everest MIP Roofing System offers a watertight seal, energy savings, lower maintenance, and superior long term performance by utilizing our “MIP” (Manufactured in Place) approach.

Everest MIP Roofing Systems

- Solutions for new and all existing roof types
- 30 years in elastomeric roof coating industry
- Extensive quality program
- Tailored project specifications available
- Class A UL approvals
- Approved Applicator program
- 5, 10 and 15 year warranties available
- Everest Systems utilizes the latest material technologies to ensure we are providing the highest performing products in the marketplace.
- Our MIP systems “put your roof to sleep” by cutting surface temperatures by as much as 75°

What 75° can do for you!

As you can see from the study below an Everest Roofing system can reduce your roof surface temperature by up to 75 degrees F in the summer heat. In fact, several studies indicate even these numbers are conservative. The multiple benefits of this major roof temperature reduction may surprise you. There are the obvious Energy benefits to any building with air conditioning but in other buildings imagine the improved comfort level and improved productivity that would result from a cooler environment. The life of your roof will also be significantly increased; the Everest system will protect the roof from harmful UV rays and the cooler temperature will cut roof degradation. Another reason for a longer roof life is the greatly reduced expansion and contraction of your building by reducing temperature swings between day and night by 75°.

Performance

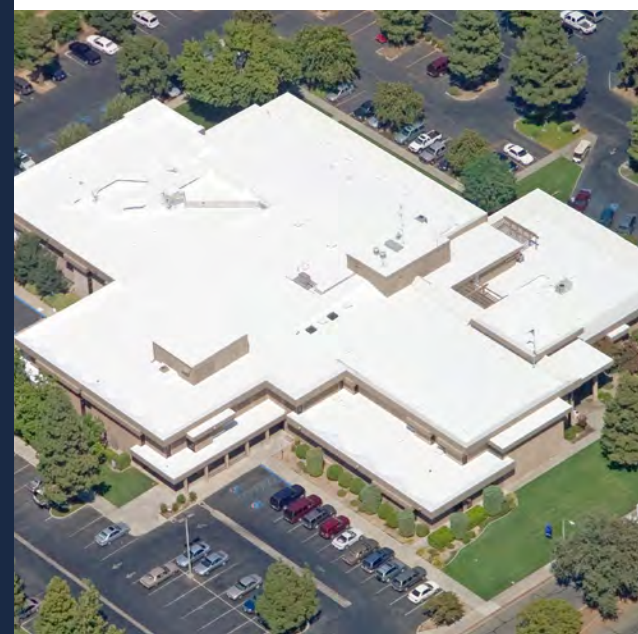

Watertight	Keeps the water out of your building.
Durable	Resistant to damage from pedestrian traffic and storm damage.
UV Resistant	Unlike traditional roofing systems an Everest MIP system has a surface that is designed for even the harshest UV conditions.
Seamless	Because our systems are manufactured in place, seams, the major weakness of most membrane systems, are eliminated.
Light Weight	Very low impact on your overall roof weight load.
Fully Adhered	Contributes to excellent wind uplift performance.
Breathable	Trapped moisture in your existing roof system will pass through the membrane.
Highly Heat Reflective	Dramatically improves occupants' comfort by typically cutting a summer roof surface temperature by 50-90° !!
Corrosion	Everest has systems designed to drastically reduce corrosion.
Resists Dirt	Excellent long term resistance to dirt accumulation.
Disruption Free	Installation is completed without bothering building occupants.
Extends Building Life	Cool roof surface will reduce expansion and contraction stresses on your building.
Looks Like New	Aesthetically pleasing final appearance.

Savings

Energy savings	Reduced solar heat gain will cut summer energy costs by up to 30%.
No Tear Off	Typically no costly tear off required.
Air Barrier	Many membrane roofs act as bellows by actually pumping out conditioned air and bringing in outside air. A fully adhered Everest MIP system will not.
Low Cost	An Everest MIP system keeps more money in your pocket compared to built up and single ply roofs.
Low Life Cycle Cost	With no tear-off and by simply maintaining the protective surface coating on your roof every 10-15 years, your roof can last indefinitely.
Rebates	Many local and federal rebates are available.
Tax Benefits	An Everest MIP system can often be fully expensed in the year of installation.

Environment

No Tear Off	Typically no need to remove roof and fill our land-fills with roof waste.
Waterbased	Non-hazardous, non-flammable and easy cleanup.
Low VOC	Meets the most stringent VOC requirements in the U.S.
Low Odor	Can be installed in situations where rooftop air handlers cannot be turned off.
Sustainable	Simply maintaining the protective surface coating on your roof every 10-15 years, your roof will last indefinitely.

Whether you are constructing a new building or have an existing roof that has leaked for many years Everest can provide a long term cost effective system that will actually save you money.

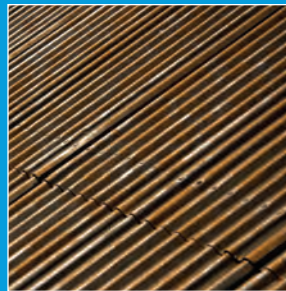

Most roofing experts would agree – the perfect commercial roofing system would have as many of these performance attributes as possible: watertight, breathable, durable, UV resistant, seamless, lightweight, highly reflective, fully adhered, an air barrier, tear off not required and of course, sustainable.

Because the system is “Manufactured in Place” and uses the highest performance components, an Everest MIP system can provide ALL of these benefits.

Suitable for ANY New or existing roof

New Construction

Metal

PVC-TPO

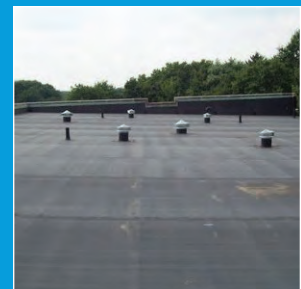

Built-up

Mod Bit

Capsheet
